Computer Science Department is a vital part of promoting quality education in terms of Sustainable Development Goals. It recognizes the need to impart knowledge and skills to students that are aligned with the principles of sustainability. The department achieves this objective by introducing relevant coursework, research, and projects that focus on sustainable development. Students are encouraged to come up with innovative ideas and solutions that will address environmental and social challenges while incorporating technology. The department is also actively involved in research activities that are geared towards promoting sustainable development. Faculty members and students undertake research that aims to identify technological solutions to environmental and social challenges. Furthermore, the Computer Science Department promotes quality education by encouraging students to take part in community outreach programs that focus on sustainable development.

The Department of Computer Science will promote Industry, Innovation, and Infrastructure with respect to the Sustainable Development Goals (SDGs) in a variety of ways, including:

1. **Developing new technologies:** The Department will contribute to innovation by developing new technologies that are more sustainable, efficient, and cost-effective.
2. **Collaboration with industry:** The Department will collaborate with industry to develop new technologies and solutions that address sustainability challenges.
3. **Research and development:** The Department will undertake research and development to develop new technologies and solutions that contribute to sustainable development.
4. **Education and training:** The Department will educate and training students in sustainable development and encourage them to develop solutions that address sustainability challenges.
5. **Public outreach and awareness:** The Department will engage in public outreach and awareness campaigns to raise awareness about sustainability and the role of technology in promoting sustainable development.

Computer Science is playing an increasingly important role in promoting partnerships for the goals with respect to the Sustainable Development Goals (SDGs). The use of communication tools like video conferencing, messaging apps, and cloud-based document sharing platforms have made it easier for people to collaborate and work together towards the SDGs. Computer Science has made it possible for people from all over the world to connect and communicate, enabling cross-border collaboration on sustainability issues. Computer Science will be used to raise awareness of sustainability issues and educate people about the importance of taking action to address them. Online courses, webinars, and social media campaigns will help to reach a wide audience and promote knowledge-sharing and learning.
